
MARCOS RODAS

Project Coordinator — Digital Platforms & AI Automation

Guatemala City, Guatemala | +502 4015-4866 | maodas00@gmail.com | linkedin.com/in/marcos-rodas | maodas.online | github.com/maodas

PROFESSIONAL SUMMARY

Results-driven professional with 15+ years of operations and commercial leadership, blended with a deliberate pivot into full-stack development, AI automation, and cloud infrastructure. Currently deliver digital platforms for USAID and U.S. Department of State-funded programs through IOM (UN Migration), translating complex technical architectures into clear roadmaps for non-technical stakeholders — and shipping the software behind them. Builds production-grade RAG and multi-agent AI systems, credentialed by Anthropic in Claude API integration and the Model Context Protocol (MCP).

CORE COMPETENCIES

AI & Automation: LangGraph, Retrieval-Augmented Generation (RAG), n8n, Claude API, Model Context Protocol (MCP), WhatsApp Business API, Twilio

Full-Stack Development: JavaScript/TypeScript (Node.js, React), Python, FastAPI, Astro, Tailwind CSS, PHP, Git/GitHub Actions

Data & Cloud: SQL, PostgreSQL, Supabase (pgvector), Firebase, GCP, AWS, Docker

Project & Program Leadership: Agile/Scrum, stakeholder management, scope governance, cross-functional team leadership, risk mitigation

PROFESSIONAL EXPERIENCE

IOM (International Organization for Migration) — ROOTS Program, Guatemala City

Project Coordinator — Digital Platforms

Jul 2024 – Present

- Lead modernization of digital services for MINTRAB and IGM (Guatemalan government institutions), translating complex technical requirements into strategic roadmaps approved by USAID and the U.S. Department of State.
- Reduced scope creep by 25% across cross-functional teams through strict scope documentation, WBS, and definition-of-done criteria, delivering platform updates up to 2 weeks ahead of schedule.
- Built automation tools with Node.js, Python, and AI that eliminated critical bottlenecks across Finance, Procurement, and Programmatic departments.
- Ensured 100% project continuity in volatile regulatory environments by architecting cost-efficient, security-first cloud solutions.
- Integrated generative AI (Claude, n8n) into standard workflows to improve technical output quality and cut delivery cycles.

Project Assistant

Aug 2023 – Jul 2024

- Promoted to Project Coordinator after one year based on impact digitizing manual workflows and improving inter-departmental coordination.
- Designed and implemented new data-handling protocols that significantly reduced application processing times.
- Created technical reports and dashboards enabling program units to visualize milestones and KPIs in real time.

IDC Los Tres, S.A., Guatemala City

Operations Manager / Lead Systems & Workflow Automation Specialist

Feb 2013 – Aug 2023

- Over a decade, evolved from managing logistics operations across offices, warehouses, and retail stores to architecting the company's digital transformation — redesigning manual workflows that cut shipping errors by 30%, then building automated data pipelines that compressed regional turnaround latencies by 40%.
- Developed custom scripting tools and SQL data procedures to clean, normalize, and validate high-volume logistics records, establishing the automated reporting infrastructure that replaced the last manual bottlenecks across 10+ person teams.
- Served as the bridge between field operations and engineering: translating process failures into structured Jira backlogs, running weekly cross-functional syncs, and keeping every improvement on scope and budget.
- Designed and implemented leadership development programs that lowered staff turnover and increased team productivity.
- Maintained 100% operational uptime during peak-demand crises through proactive risk mitigation.

Calzado Matrix de Guatemala

Regional Sales Supervisor

Apr 2007 – Dec 2012

- Consistently exceeded regional revenue targets of Q2 million/month across 22 branches through data-driven sales planning tailored to local markets.
- Mentored branch managers and standardized sales and customer-service processes across urban and rural regions.
- Built the operational and reporting discipline that became the foundation of a 15+ year career in operations and technology leadership.

KEY PROJECTS

FastAPI RAG Documentation Assistant — github.com/maodas/rag-project-fastapi · rag-project-fastapi.vercel.app

Serverless retrieval-augmented generation assistant grounding answers in official documentation via FastAPI, LangChain, and Supabase (pgvector), eliminating model hallucinations.

Multi-Agent Compliance Auditor — github.com/maodas/agentik-auditor · agentik-auditor-eta.vercel.app

Stateful multi-agent system built on LangGraph that decomposes tasks and audits legal/compliance documents in real time, with an Astro frontend and Supabase (pgvector) backend.

Mass Beneficiary Messaging — github.com/maodas/verificador-n-meros-render

Segmented communication system with automated delivery reporting for high-volume social programs, built on Node.js and the Twilio API.

WhatsApp AI Chatbot — github.com/maodas/asistente-inteligente-multicanal

24/7 customer service automation with OpenAI-powered responses, human handoff, and an admin monitoring panel (Python, Docker, PostgreSQL, Celery).

EDUCATION

B.S. in Administrative Engineering (in progress, 5th semester)

Universidad Galileo, Guatemala

Associate Degree in Software Development

Universidad Galileo, Guatemala

Industrial Bachelor / Computer Technician

Instituto Tecnológico Federico Taylor, Guatemala
